SETTING GLOBAL BENCHMARKS IN MANUFACTURING

Ever since its inception in 1964, Polycab has been relentlessly innovating to make lives easier and safer. Driven by an unwavering commitment to quality and delighting consumers, Polycab has evolved from being India's largest wire and cable manufacturer to becoming one of the country's leading end-to-end electrical solutions brands.

Polycab fans are meticulously designed for aspiring consumers and come in an extensive portfolio that includes ceiling fans, table fans, wall mounted fans, fresh air exhaust fans and Farrata. Polycab fans are manufactured in one of India's largest fan factories in Roorkee, Uttarakhand with every process taking place under one roof. Check out the meticulous manufacturing processes listed below which ensure that our customers continue to get products of the highest quality, for years to come.

Automated Copper Winding

The copper winding process is entirely automated and guarantees perfection. Each heavy duty winding uses 99.999% pure copper; thus making it the best in the industry.

Automatic Robotic Paint Shop (imported from Switzerland)

The robotic paint shop, sourced from ITWGEMA, Switzerland coats the various fan parts in a uniform, precise manner. A wide choice of colours followed by a high grade laminated cover to protect the surface complete the in-house painting process.

Perfect dimensions with CNC Machine

The fan's blades along with top and bottom cover are built using high quality aluminium on a dedicated assembly line. CNC machines are used to ensure perfect dimensions. The precise optimum angle of the fan blades creates higher air velocity and distributes air evenly.

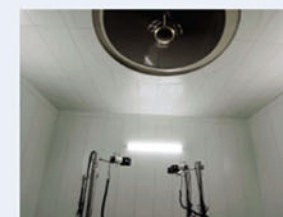

In-house Automatic Air-Delivery Testing Lab

Each and every finished product is tested in a specifically designed, in-house Automatic Air-Delivery Testing Lab for air delivery and distribution capacity. Polycab fan's superior air delivery between 225 CMM to 260 CMM will rejuvenate every person in the room with a gust of refreshing breeze.

Computer Controlled 7 Tank Anti-Rust Process

Every body part of the fan goes through a computer controlled 7 Tank Anti-Rust process, which includes degreasing, cleaning, moisture removal and drying. This process enhances the life of the paint coat while giving it a durable and glossy finish.

Little wonder that Polycab fans are the perfect choice boasting the best in conventional and contemporary comforts.

KEY FEATURES

An advanced nano coating on the fan blades that keeps dust, rust and germs away, ensuring a clean, safe and healthy indoor environment for your loved ones.

A tried and tested process that eliminates material impurities and defects from a painted surface. It provides a superior finish and long lasting protection to fans.

The large and wide fan blades ensure maximum air delivery and wide air throw to cool every corner of the room.

Well-defined controls have been put in place to standardize production and quality inspection. Trained personnel conduct regular audits of every material and process from entry to exit stage, ensuring consistent product quality every time.

A high speed ceiling fan is a fan that delivers excellent air circulation throughout the room, owing to its high-performance motor.

Load loss can be reduced and electrical energy efficiency can be improved by increasing the cross section of copper coils. Hence Polycab's high efficiency motor use higher amount of copper in the winding.

The highest grade of pure copper, also known as electrolytic grade copper, is used for motor winding in Polycab fans. It is thermostatically balanced, maximizes electrical conductivity and is highly efficient.

Polycab ceiling fans come in a variety of finishes and colors. You can select a color which suits your application and matches your room perfectly. Listed here are the various finishes to choose from:

- Pearl • Metallic • Electroplated
- Luster • Antique Copper

Polycab fans use double ball bearing that supports the motor and fan shaft at two locations. Such fans have reduced friction and perform consistently in any orientation.

The totally enclosed and ruggedly built heavy duty motor ensures high performance and delivers maximum output at lower operating cost.

The intelligently designed fan blades consistently push cool air downwards. The asymmetric alignment of the blades coupled with higher blade width ensures maximum air delivery.

Polycab fans use a highly specialized protective layer that makes the fan blades rust proof and prevents corrosion.

A uniquely engineered motor that emits low heat even after running for hours. This greatly enhances the motor's efficiency.

Abbreviation for Maximum Performance Minimum Voltage. It's a high-performing electric motor that operates at maximum efficiency yet consumes minimum voltage.

The aerodynamically designed blades reduce the drag from air and maximize air delivery.

Count on Aura LED to add some extra touch of style to your home decor. A perfect union of innovation and creativity found as distinctive feature in Polycab designer range of fans. Aura LED makes every room lively, aesthetically pleasing and uplifts the ambience as per your mood with its multi-coloured LED mood lights.

FANS

KEY FEATURES - TPW FANS

Polycab TPW fans are meticulously engineered to prevent overheating of motor and blades, thus increasing its efficiency.

A high-performance motor powers Polycab TPW fans, thus ensuring greater comfort & excellent air circulation throughout the room.

The low resistivity of copper reduces energy losses and also increases the lifespan of the fan motor.

The aerodynamically designed blades coupled with increased blade width reduce drag and maximizes air delivery.

Polycab TPW fans give you the highest air delivery and wide air throw to cool the room.

Jerk free and uniform oscillation ensures the flow of cool air reaches all the parts of a room with ease.

A protection tool that prevents small children from inserting their finger or accidentally touching the fast rotating blades.

The adjustable height setting allows users to adjust the height as per their requirement.

A high-performing electric motor that operates at optimum efficiency yet consumes much less power.

Polycab TPW fans have aerodynamically balanced blades for superior air delivery.

Polycab TPW fans are fitted with a high performance, totally enclosed motor that delivers maximum output.

KEY FEATURES - EXHAUST FANS

The exhaust fan helps extract stale, impure air, along with moisture and dirt, and encourages continuous circulation of fresh air, thereby improving the air quality.

The specially designed blades suck out smoke, fine dust particles, odour and fume, thus leaving a fresh and pleasant environment in your bathroom and kitchen.

Polycab Exhaust fans come with a high-performance, efficient motor that provides excellent air throw.

The blades rotate at the speed of 2000 RPM which makes Polycab Exhaust fans very effective at drawing out stale air and fumes quickly from any room.

The low resistivity of copper reduces energy losses and also increases the lifespan of the fan motor.

The simple design and efficient functionality of Polycab Exhaust fans makes it easy to clean and maintain.

A highly specialized coating that prevents rusting and provides robust protection against corrosion.

The aerodynamically designed blades coupled with increased blade width reduce drag and maximizes the air sweep.

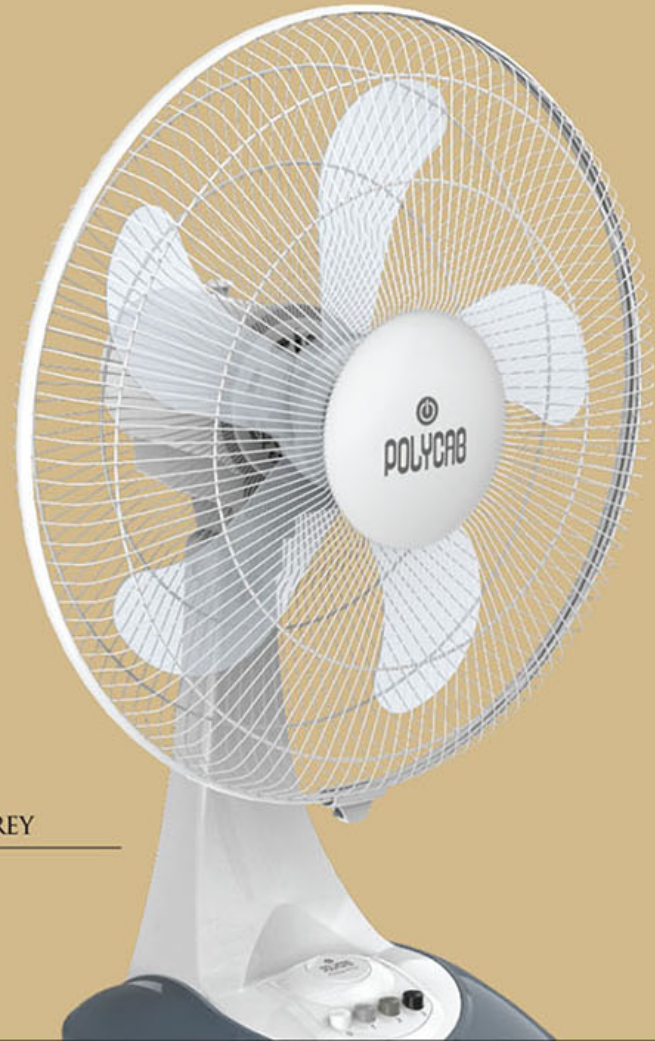

The contoured blade design ensures a vibration free and noiseless operation at all times. Now you can work or sleep without any disturbance.

Polycab Exhaust fans are fitted with a high performance, totally enclosed motor that delivers maximum output - working continuously for hours - at lower operating cost.

Powder coated finish increases the lifespan of the exhaust fan and also blends well with any interior.

A modern living room with a large window, a blue sofa, a coffee table, and a standing fan. The room is bathed in a soft, warm light, likely from the window. The sofa is a deep blue color, and the coffee table is a light wood. A standing fan is positioned in the foreground, and a lamp is visible on the right side of the room. The overall atmosphere is cozy and contemporary.

A silver Polycab air circulator fan stands in the center of a long, brightly lit warehouse aisle. The aisle is flanked by tall, metal shelving units filled with stacks of cardboard boxes. The floor is polished and reflects the overhead lights. The fan has a circular grille with the brand name 'POLYCARB' visible on the front. The overall scene is a warm, orange-toned environment.
